

AQA A-Level Further Mathematics Paper 3 Mechanics & Discrete 2022 Warmup

<p>How do you calculate work done for a constant force F? How about for a variable force F</p>	<p>Describe the complete bipartite graph $K_{m,n}$. Draw $K_{3,2}$.</p>	<p>What are the properties of a group $(G, *)$</p>	<p>How do you decide if a shape on an inclined plane will topple or slide?</p>	<p>A body moving on a horizontal circular path of radius r with a constant angular velocity has:</p> <p>speed - acceleration - centripetal force -</p>																					
<p>A car of mass 1200 kg is moving down a hill inclined at an angle θ where $\sin(\theta) = \frac{1}{30}$. The car is accelerating at 1.2ms^{-1} and the engine is working at a constant rate of 35 kW. Find the magnitude of the non-gravitational resistance to motion at the instant when the car is moving travelling at 5ms^{-1}.</p>	<p>In the topic of collisions how do you define the coefficient of restitution?</p>	<p>A particle of mass 1.2 kg is acted on by a time dependent force of $F = 2t + 3e^{-2t}$. Find the impulse exerted by this force if the force is applied for 2 seconds.</p>	<p>For the tasks shown in the table to the right complete the activity network in the boxes below and identify the critical activities.</p>	<table border="1" style="width: 100%; border-collapse: collapse; text-align: center;"> <thead> <tr style="background-color: #cccccc;"> <th>Task</th> <th>Immediate Predecessors</th> <th>Duration (days)</th> </tr> </thead> <tbody> <tr> <td>A</td> <td>-</td> <td>3</td> </tr> <tr> <td>B</td> <td>-</td> <td>2</td> </tr> <tr> <td>C</td> <td>A,B</td> <td>4</td> </tr> <tr> <td>D</td> <td>B</td> <td>2</td> </tr> <tr> <td>E</td> <td>C,D</td> <td>5</td> </tr> <tr> <td>F</td> <td>C</td> <td>4</td> </tr> </tbody> </table>	Task	Immediate Predecessors	Duration (days)	A	-	3	B	-	2	C	A,B	4	D	B	2	E	C,D	5	F	C	4

<p>Define the following terms from Game Theory:</p> <ol style="list-style-type: none"> 1. zero sum game 2. play safe strategy 	<p>Four point masses are arranged in the cartesian plane. A has mass 2 kg at (1,1), B has mass 3 kg at (2,4), C has mass 1 kg at (3,2) and D has mass 4 kg at (4,3). Find the centre of mass of this system of particles?</p>	<p>A particle P of mass 1kg is moving at a speed of 5ms^{-1} collides with a particle Q of mass 2kg which is at rest. Given that after the collision P moves with speed 2ms^{-1}, find the speed of Q after the collision.</p>	<pre> graph LR A[A] --> C[C] B[B] --> C B --> D[D] C --> E[E] D --> E E --> End[End] F[F] --> End </pre>																						
<p>An elastic string has natural length of 6m. If it is stretched by an extension x_1 it reaches point A, if it is stretched by an extension x_2 it reaches point B. If the modulus of elasticity is 50N find the work done in stretching the string from A to B.</p>	<p>What is a cyclic group?</p>	<p>State Euler's formula for connected planar graphs.</p>	<p>Create the Cayley table for \times_4 on the set $\{0,1,2,3\}$</p>	<p>An 3 kg object, which is initially at rest, falls 10 m freely under gravity to hit the ground. Find its final speed.</p>
